## **DETAILED ACTION**

This Office action is responsive to communication received 03/39/2004 – application papers filed.

This application is a DIV of 10/422,511, filed 04/24/2003, now U.S. Patent no. 6,733,399, which is a DIV of 09/867,215, filed 05/29/2001, now U.S. Patent No. 6,692,370.

Claims 1-25 are pending.

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1, 8-17 and 19, drawn to an apparatus (for attachment to a golf club shaft claim 1) or an apparatus (not further specified claims 8-17 and 19), classified in class 473, subclass 219.
- II. Claims 2-7, and 18, drawn to an apparatus comprising a golf club shaft (in other words, the claims require that the apparatus is attached to the golf club shaft, thus introducing a positive recitation for the club shaft), classified in class 473, subclass 224.
- III. Claims 20-25, drawn to a method comprising the steps of attaching a sound generation element to a golf club shaft, classified in class 473, subclass 409.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and III are related as product and process of use. The inventions

can be shown to be distinct if either or both of the following can be shown: (1) the

Application/Control Number: 10/812,046

Art Unit: 3711

process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the sound generation element may be attached to a materially different product such as a flag post or car antenna mast or may simply be hung by any convenient means much like a wind chime is hung outside of a window to produce a decorative and audible window accessory. The claimed sound generation element may be attached to a string much like a kite is flown from a string.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not recite the specifics of the subcombination, specifically a first clip. The subcombination has separate utility such as being useful as a windsock.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/812,046

Art Unit: 3711

Should applicant opt to elect prosecution of the claims from either Group I or Group II, a plurality of disclosed patentably distinct species may be identified, as set forth below. Applicant is required under 35 USC 1.121 to elect a single disclosed species, even though the requirement is traversed.

Species I: Figures 1-4;

Species II: Figures 5 and 6;

Species III: Figures 7-11;

Species IV: Figures 12 and 13;

Species V: Figure 14.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sebastiano Passaniti whose telephone number is 703-308-1006. The examiner can normally be reached on Mon-Fri (6:30-3:00).

Application/Control Number: 10/812,046 Page 5

Art Unit: 3711

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg Vidovich can be reached on 703-308-1513. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
